<i>About the Author</i>	<i>xix</i>
<i>About the Technical Reviewer and Contributing Author</i>	<i>xxi</i>
 Chapter 1 <i>Apache and the Internet</i>	1
<i>Apache: The Anatomy of a Web Server</i>	<i>1</i>
The Apache Source	1
The Apache License	1
Support for Apache	2
How Apache Works	3
<i>The Hypertext Transfer Protocol</i>	<i>7</i>
HTTP Requests and Responses	7
HTTP Headers	12
<i>Networking and TCP/IP</i>	<i>13</i>
Definitions	13
Packets and Encapsulation	14
ACKs, NAKs, and Other Messages	15
The TCP/IP Network Model	16
Non-IP Protocols	19
IP Addresses and Network Classes	19
Special IP Addresses	20
Netmasks and Routing	21
Web Services: Well-Known Ports	23
Internet Daemon: The Networking Super Server	24
The Future: IPv6	25
Networking Tools	26
<i>Server Hardware</i>	<i>29</i>
Supported Platforms	29
Basic Server Requirements	30
Memory	31
Network Interface	32
Internet Connection	32
Hard Disk and Controller	33
Operating System Checklist	33
Redundancy and Backup	34
Specific Hardware Solutions	35
<i>Get Someone Else to Do It</i>	<i>36</i>
<i>Summary</i>	<i>36</i>

Chapter 2 Getting Started with Apache	37
Installing Apache	38
Getting Apache	38
Installing Apache from Binary Distribution.....	39
Installing Apache from Source	41
Installing Apache from Prebuilt Packages.....	41
Installing Apache by Hand	45
Upgrading Apache.....	47
Other Issues	49
Basic Configuration	50
Decisions.....	50
Introducing the Master Configuration File	55
Other Basic Configuration Directives.....	56
Starting, Stopping, and Restarting the Server	57
Starting Apache on Unix.....	58
Starting Apache on Windows	59
Invocation Options	60
Restarting the Server.....	73
Stopping the Server.....	75
Starting the Server Automatically	76
Testing the Server	81
Testing with a Browser	82
Testing from the Command Line or a Terminal Program	82
Testing the Server Configuration Without Starting It	85
Getting the Server Status from the Command Line	86
Using Graphical Configuration Tools	86
Comanche.....	87
TkApache	91
LinuxConf	91
Webmin.....	91
ApacheConf	97
Other Configuration Tools	99
Summary	100
 Chapter 3 Building Apache the Way You Want It	101
Why Build Apache Yourself?	101
Verifying the Apache Source Archive	103
Building Apache from Source	105
Configuring and Building Apache	106
Determining Which Modules to Include.....	111
Building Apache As a Dynamic Server	116

Changing the Module Order (Apache 1.3)	118
Checking the Generated Configuration	120
Building Apache from Source As an RPM (Apache 2)	122
<i>Advanced Configuration</i>	124
Configuring Apache's Layout.....	124
Choosing a Layout Scheme	124
Choosing a Multiprocessing Module (Apache 2).....	132
Rules (Apache 1.3)	135
Building Apache with suExec support.....	137
Configuring Apache's Supporting Files and Scripts	139
Configuring Apache 2 for Cross-Platform Builds	140
Configuring Apache for Production or Debug Builds	142
Configuring Apache for Binary Distribution.....	143
Configuring Apache's Library and Include Paths.....	143
<i>Configuring the Build Environment</i>	144
<i>Building Modules with configure and apxs</i>	146
Adding Third-Party Modules with configure	146
Building Modules with apxs	148
Installing Modules with apxs.....	150
Generating Module Templates with apxs.....	151
Overriding apxs Defaults and Using apxs in makefiles.....	152
<i>Summary</i>	153

***Chapter 4 Configuring Apache the Way You Want It*...155**

<i>Where Apache Looks for Its Configuration</i>	155
Configuration File Syntax	156
Configuration for Virtual Hosts	156
Including Multiple Configuration Files	157
Per-Directory Configuration	159
Conditional Configuration	160
<i>How Apache Structures Its Configuration</i>	163
Apache's Container Directives.....	164
Directive Types and Locations	168
Where Directives Can Go.....	171
Container Scope and Nesting.....	172
How Apache Combines Containers and Their Contents	174
Legality of Directives in Containers.....	175
<i>Options and Overrides</i>	176
Enabling and Disabling Features with Options	176
Overriding Directives with Per-Directory Configuration.....	179

<i>Restricting Access with allow and deny</i>	182
Controlling Access by Name.....	183
Controlling Access by IP Address.....	184
Controlling Subnet Access by Network and Netmask.....	185
Controlling Access by HTTP Header	186
Combining Host-Based Access with User Authentication.....	187
Overriding Host-Based Access	188
<i>Directory Listings</i>	188
Enabling and Disabling Directory Indices	189
How mod_autoindex Generates the HTML Page	190
Controlling Which Files Are Seen with IndexIgnore.....	196
Controlling the Sort Order	197
Assigning Icons.....	199
Assigning Descriptions	202
<i>Apache's Environment</i>	203
Setting, Unsetting, and Passing Variables from the Shell.....	204
Setting Variables Conditionally	205
Special Browser Variables	207
Detecting Robots with BrowserMatch.....	209
Passing Variables to CGI	209
Conditional Access Control.....	210
Caveats with SetEnvIf vs. SetEnv.....	210
Setting Variables with mod_rewrite	211
<i>Controlling Request and Response Headers</i>	211
Setting Custom Response Headers.....	213
Setting Custom Request Headers.....	215
Inserting Dynamic Values into Headers	216
Setting Custom Headers Conditionally.....	217
Retrieving Response Headers from Metadata Files.....	217
Setting Expiry Times	219
<i>Sending Content As-Is</i>	222
<i>Controlling the Server Identification Header</i>	223
<i>Sending a Content Digest</i>	224
<i>Handling the Neighbors</i>	225
Controlling Robots with robots.txt	226
Controlling Robots in HTML.....	227
Controlling Robots with Access Control.....	227
Attracting Robots.....	228
Making Sure Robots Index the Right Information.....	228
Known Robots, Bad Robots, and Further Reading	229
<i>Summary</i>	229

<i>Chapter 5 Deciding What the Client Needs</i>	231
<i>Content Handling and Negotiation</i>	231
File Types	232
File Encoding.....	236
File Languages.....	243
File Character Sets.....	245
Handling URLs with Extra Path Information	247
Content Negotiation	248
Content Negotiation with MultiViews.....	250
File Permutations and Valid URLs with MultiViews	256
Magic MIME Types.....	260
<i>Error and Response Handling</i>	264
How Apache Handles Errors.....	265
Error and Response Codes	265
The ErrorDocument Directive	266
Limitations of ErrorDocument	270
<i>Aliases and Redirection</i>	271
Aliases and Script Aliases.....	271
Redirections.....	273
Rewriting URLs with mod_rewrite.....	277
Server-Side Image Maps	300
Matching Misspelled URLs	305
<i>Summary</i>	306
 <i>Chapter 6 Delivering Dynamic Content</i>	307
<i>Server-Side Includes</i>	308
Enabling SSI.....	309
Format of SSI Commands.....	311
The SSI Command Set	312
SSI Variables.....	312
Passing Trailing Path Information to SSIs (and Other Dynamic Documents)	315
Setting the Date and Error Format.....	316
Templating with SSIs.....	317
Caching Server-Parsed Documents	319
Identifying Server-Parsed Documents by Execute Permission	320
<i>CGI: The Common Gateway Interface</i>	321
CGI and the Environment	321
Configuring Apache to Recognize CGI Scripts	323
Setting Up a CGI Directory with ExecCGI: A Simple Way	327
Triggering CGI Scripts on Events	330

<i>ISINDEX-Style CGI Scripts and Command Line Arguments</i>	332
<i>Writing and Debugging CGI Scripts</i>	333
A Minimal CGI Script.....	333
Interactive Scripts: A Simple Form	337
Adding Headers.....	338
<i>Debugging CGI Scripts</i>	339
Setting the CGI Daemon Socket.....	345
Limiting CGI Resource Usage.....	346
<i>Actions, Handlers, and Filters</i>	347
Handlers.....	348
Filters.....	354
<i>Dynamic Content and Security</i>	363
CGI Security Issues.....	363
Security Advice on the Web	364
Security Issues with Apache CGI Configuration.....	364
An Example of an Insecure CGI Script	365
Known Insecure CGI Scripts.....	370
CGI Wrappers.....	370
Security Checklist.....	380
<i>Inventing a Better CGI Script with FastCGI</i>	381
<i>Summary</i>	403
 <i>Chapter 7 Hosting More Than One Web Site</i>	 405
<i>Implementing User Directories with UserDir</i>	406
Enabling and Disabling Specific Users.....	407
Redirecting Users to Other Servers.....	408
Alternative Ways to Implement User Directories	409
<i>Separate Servers</i>	410
Restricting Apache's Field of View.....	411
Specifying Different Configurations and Server Roots	412
Starting Separate Servers from the Same Configuration	412
Sharing External Configuration Files.....	413
<i>IP-Based Virtual Hosting</i>	414
Multiple IPs, Separate Networks, and Virtual Interfaces.....	415
Configuring What Apache Listens To.....	416
Defining IP-Based Virtual Hosts.....	418
Virtual Hosts and the Server-Level Configuration.....	421
Specifying Virtual Host User Privileges.....	422
Excluded Directives.....	426
<i>Default Virtual Hosts</i>	427

<i>Name-Based Virtual Hosting</i>	428
Defining Named Virtual Hosts	428
Server Names and Aliases.....	430
Defining a Default Host for Name-Based Virtual Hosting	430
Mixing IP-Based and Name-Based Hosting.....	431
<i>Issues Affecting Virtual Hosting</i>	434
Log Files and File Handles.....	434
Virtual Hosts and Server Security	436
Secure HTTP and Virtual Hosts.....	437
Handling HTTP/1.0 Clients with Name-Based Virtual Hosts	439
<i>Dynamic Virtual Hosting</i>	441
Mass Hosting with Virtual-Host Aliases	441
Mapping Hostnames Dynamically with mod_rewrite.....	448
Generating On the Fly and Included Configuration Files with mod_perl.....	449
<i>Summary</i>	455
 <i>Chapter 8 Improving Apache's Performance</i>	457
 <i>Apache's Performance Directives</i>	458
Configuring MPMs: Processes and Threads.....	459
Network and IP-Related Performance Directives.....	470
HTTP-Related Performance Directives	472
HTTP Limit Directives	475
<i>Configuring Apache for Better Performance</i>	477
Directives That Affect Performance	477
Additional Directives for Tuning Performance	482
<i>Benchmarking Apache's Performance</i>	490
Benchmarking Apache with ab	490
Benchmarking Apache with gprof	495
External Benchmarking Tools	496
Benchmarking Strategy and Pitfalls.....	496
<i>A Performance Checklist</i>	497
<i>Proxying</i>	498
Installing and Enabling Proxy Services.....	498
Normal Proxy Operation.....	499
Configuring Apache As a Proxy	500
URL Matching with Directory Containers	502
Blocking Sites via the Proxy	504
Localizing Remote URLs and Hiding Servers from View	504
Relaying Requests to Remote Proxies	508
Proxy Chains and the Via Header.....	509
Proxies and Intranets	512
Handling Errors.....	512

Timing Out Proxy Requests	514
Tunneling Other Protocols	514
Tuning Proxy Operations	515
Squid: A High-Performance Proxy Alternative	516
<i>Caching</i>	516
Enabling Caching	516
File-Based Caching	517
In-Memory Caching (Apache 2 Only)	520
Coordinating Memory-Based and Disk-Based Caches	522
General Cache Configuration	522
Maintaining Good Relations with External Caches	527
<i>Fault Tolerance and Clustering</i>	529
Backup Server via Redirected Secondary DNS	530
Load Sharing with Round-Robin DNS	531
Backup Server via Floating IP Address	531
Hardware Load Balancing	532
Clustering with Apache	533
Other Clustering Solutions	536
<i>Summary</i>	537
 <i>Chapter 9 Monitoring Apache</i>	 539
<i>Logs and Logging</i>	539
Log Files and Security	540
The Error Log	540
Setting the Log Level	541
Logging Errors to the System Log	542
Transfer Logs	544
Driving Applications Through Logs	554
Log Rotation	556
<i>Lies, Logs, and Statistics</i>	560
What You Can't Find Out from Logs	560
Analog: A Log Analyzer	561
<i>Server Information</i>	577
Server Status	578
Server Info	581
Securing Access to Server Information	582
<i>User Tracking</i>	583
Alternatives to User Tracking	584
Cookie Tracking with mod_usertrack	584
URL Tracking with mod_session	589
Other Session Tracking Options	594
<i>Summary</i>	595

<i>Chapter 10 Securing Apache</i>	597
<i>User Authentication</i>	597
Apache Authentication Modules	598
Authentication Configuration Requirements	599
Using Authentication Directives in .htaccess	601
Basic Authentication	601
Digest Authentication	603
Anonymous Authentication	606
Setting Up User Information	606
Specifying User Requirements	614
LDAP Authentication	617
Using Multiple Authentication Schemes	624
Combining User- and Host-Based Authentication	626
Securing Basic Authentication with SSL	627
<i>SSL and Apache</i>	627
Downloading OpenSSL and ModSSL	628
Building and Installing the OpenSSL Library	629
Building and Installing mod_ssl for Apache 2	633
Building and Installing mod_ssl for Apache 1.3	633
Basic SSL Configuration	637
Installing a Private Key	639
Creating a Certificate Signing Request and Temporary Certificate	640
Getting a Signed Certificate	642
<i>Advanced SSL Configuration</i>	644
Server-Level Configuration	644
Client Certification	657
<i>Using Client Certification with User Authentication</i>	659
SSL and Logging	660
SSL Environment Variables and CGI	662
SSL and Virtual Hosts	666
Advanced Features	668
<i>Summary</i>	671
 <i>Chapter 11 Improving Web Server Security</i>	673
<i>Apache Features</i>	673
Unwanted Files	674
Automatic Directory Indices	674
Symbolic Links	675
Server-Side Includes	676
ISINDEX-Style CGI Scripts	677
Server Tokens	677

<i>File Permissions</i>	678
<i>Viewing Server Information with mod_info</i>	679
<i>Restricting Server Privileges</i>	679
<i>Restricting Access by Hostname and IP Address</i>	680
<i>Other Server Security Measures</i>	682
<i>Dedicated Server</i>	682
<i>File Integrity</i>	683
md5sum	684
Tripwire	685
<i>Hardening the Server</i>	686
Minimizing Services	686
Port Scanning with nmap	688
Probing with Nessus	689
Hardening Windows 2000 and XP	689
<i>Disabling Network Services</i>	690
File Transfer Protocol (FTP)	690
telnet	690
rlogin, rsh, rexec, rcp	690
Network Filesystem (NFS)	690
sendmail/Other Mail Transport Agents (MTAs)	691
Restricting Services with TCP Wrappers	691
<i>Security Fixes, Alerts, and Online Resources</i>	693
The WWW Security FAQ	693
The BugTraQ Mailing List and Archive	693
Operating System Newsletters	693
Package and Module Notification	694
<i>Removing Important Data from the Server</i>	694
<i>Enabling Secure Logins with SSH</i>	694
Building and Installing OpenSSH	695
Authentication Strategies	698
Configuring SSH	699
Testing SSH	702
Expanding SSH to Authenticate Users	703
Secure Server Backups with Rsync and SSH	704
Forwarding Client Connections to Server Applications	705
<i>Firewalls and Multifacing Servers</i>	706
Types of Firewall	706
Designing the Network Topology	707
<i>Running Apache Under a Virtual chroot Root Directory</i>	709
What chroot Is	709
What chroot Isn't	710
Setting Up Apache for chroot Operation	711

<i>Server Security Checklist</i>	723
Avoid Root Services	723
Maintain Logs Properly	723
Keep It Simple.....	724
Block Abusive Clients.....	724
Have an Effective Backup and Restore Process	725
Plan for High Availability, Capacity, and Disaster Recovery	725
Monitor the Server	725
Take Care with Information Flow.....	726
Choose an Effective robots.txt Policy	726
<i>Summary</i>	726
 <i>Chapter 12 Extending Apache</i>	727
 <i>WebDAV</i>	727
Adding WebDAV to Apache.....	728
The WebDAV Protocol.....	729
Configuring Apache for WebDAV	731
Restricting Options and Disabling Overrides	734
WebDAV and Virtual Hosts	735
Configuring the DAV Lock Time.....	735
Limitations of File-Based Repositories.....	736
Protecting WebDAV Servers.....	737
More Advanced Configurations	737
Cooperating with CGI and Other Content Handlers.....	740
<i>ISAPI</i>	741
Supported ISAPI Support Functions	742
Configuring ISAPI Extensions	743
Setting the Maximum Initial Request Data Size	744
Logging ISAPI Extensions	745
Preloading and Caching ISAPI Extensions.....	746
Handling Asynchronous ISAPI Extensions	746
<i>Perl</i>	746
Building and Installing mod_perl.....	748
Migrating mod_perl from Apache 1.3 to Apache 2.....	755
Configuring and Implementing Perl Handlers	758
Configuring and Implementing Perl Filters	771
Warnings, Taint Mode, and Debugging.....	772
Managing Perl Threads in mod_perl 2.....	774
Initializing Modules at Startup.....	779
Restarting mod_perl and Auto-Reloading Modules.....	780
Creating a mod_perl Status Page	782
Running CGI Scripts Under mod_perl	782

CGI Caveats.....	785
Passing Variables to Perl Handlers	787
Using mod_perl with Server-Side Includes.....	788
Embedding Perl in HTML.....	789
Embedding Perl in Apache's Configuration	794
<i>PHP</i>	795
Installing PHP.....	796
Getting the PHP source.....	796
Configuring Apache to Work with PHP.....	802
Configuring PHP	803
Testing PHP with Apache.....	807
<i>Tomcat/Java</i>	807
So What Is Tomcat?.....	807
Installation.....	808
Tomcat Configuration.....	813
mod_jk	818
Mod_python	829
mod_ruby.....	835
<i>Summary</i>	839
 <i>Index</i>	 843

Online Appendixes

The following appendixes are available in printable PDF format at <http://www.apress.com/book/download.html>:

Appendix A: Useful RFCs

Appendix B: Apache Variants

Appendix C: The Apache License

Appendix D: Environment Variables

Appendix E: Server Side Includes

Appendix F: Regular Expressions

Appendix G: Third Party Apache Modules

Appendix H: HTTP Headers and Status Codes

Appendix I: Directives by Module

Appendix J: Directives by Name

You must have Adobe Acrobat or Adobe Acrobat Reader to view PDF files.
